PREFACE

As already pointed out in part I of this "Bibliography", the present part is entirely devoted to the literature on Birds.

Following the same line of investigation, I have succeeded in listing 474 references on the Avifauna of the Middle-Eastern States (Iraq and neighbouring countries). The list has been brought up-to-date, through the addition of much of the literature published, so far, in 1954.

It is hoped that this paper will render much help to the students of birds in this part of the world.

Iraq Natural History Museum,
Baghdad.
November 15, 1954.

BASHIR E. ALLOUSE

PREFACE

An attempt is made in this book to present a
partial history of the American people
from the time of the discovery of the continent
to the present. The book is not intended
as a history of the American people, but
as a history of the American continent.
It is hoped that the reader will find
in this book a history of the American
continent.
